

Ingest automation and remote playlist management system based on XML

Works with EVS XS/XT[2]/XT[2]+ videosevers
and videosevers of another manufacturers

System allows:

- create ingest lists for one or multiple videosevers with possibility to add metadata
- create playlists for playout
- import playlists and edit them
- import log lists
- create, import and edit keyword dictionaries and keyword grids

Using this Microsoft Excel toolbar you will be able to create playlists, ingest lists, keyword grids and dictionaries for videosever on any PC with Windows operating system.

Flexible way of choosing metadata that you need and usage of Microsoft Office software which is known by most of computer users simplifies the process and makes it opened for all non-technical specialists.

Data can be easily transferred to videosever using Gigabit network, USB drive or internet.

If the event for which you are creating the ingest list is located in another time zone you can specify the TC offset which will be taken into account during the export.
